Model Development for GFDL's Next Generation Climate and Earth System Models (Wrap up)

Presented by

Isaac Held

Management challenges

Creating model platforms that will be useful to the entire lab as well as to other NOAA and non/NOAA modeling efforts

Entraining outside expertise into model development

Producing model that are not only publically available but also easily modified and fully documented

Creating models that are ready for implementation on new massively scalable architectures

Making model development interesting scientifically and attractive to new generation of scientists
